

Gurjar Siddhant Begraj

FULL-STACK SOFTWARE ENGINEER · REACT · TYPESCRIPT · NEXT.JS

Gautam Budh Nagar, Uttar Pradesh, India | +91 9321591561 | siddhantgurjar2005@gmail.com | siddhantdev.me | github.com/SiddhantisDead

PROFESSIONAL SUMMARY

Computer Science graduate (Galgotias University, 2026) who ships production software end to end. Built and deployed four live applications across three stacks: a Next.js commerce platform with a real dealer portal and GST billing, a TypeScript app running on the Cloudflare edge, a FastAPI + React analytics console, and a C++17 engine with a GoogleTest CI suite. Comfortable owning a feature from schema design through deployment — Postgres and Drizzle at the data layer, React and TypeScript at the interface, Vercel/Render/Cloudflare in production. Seeking a full-stack or frontend engineering role.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript, Vite, shadcn/ui, Tailwind-style utility CSS, responsive layout, Qt6 (C++ desktop)

Backend & Data: FastAPI, Python, Node/Cloudflare Workers, REST API design, PostgreSQL, Supabase, Neon, Drizzle ORM, relational data modeling, JWT authentication & role-based access

Languages: TypeScript, JavaScript, Python, C++17

Infrastructure & Tooling: Vercel, Render, Cloudflare Workers, Docker, Git/GitHub, GitHub Actions (CI/CD), CMake, GoogleTest, ESLint, Prettier, Linux

SELECTED PROJECTS

Murtiwallah — E-Commerce & Wholesale Platform

murtiwallah.com

Next.js, React, TypeScript, Supabase, PostgreSQL, Vercel

- Designed and shipped a live commerce platform for a real catalog business, from database schema to deployed frontend, using Next.js, Supabase and Vercel.
- Architected a dual-channel model: a public retail storefront alongside an authenticated wholesale dealer portal with tiered minimum-order-quantity pricing and GST-compliant invoicing.
- Built cart, wishlist, search and order-tracking flows plus an internal admin console for catalog and order management, backed by row-level access rules in Supabase.

Sieve — AI-Powered Resume Screening Platform

raven-resume-smoky.vercel.app/screen | github.com/SiddhantisDead/raven-resume

React, TypeScript, Vite, Cloudflare Workers, Drizzle ORM, shadcn/ui

- Engineered a full-stack TypeScript application for automated resume screening, deployed as a Cloudflare Worker for low-latency edge execution with no server to maintain.
- Modeled and queried application data with Drizzle ORM, built the interface on shadcn/ui, and enforced code quality with ESLint, Prettier and a GitHub Actions CI pipeline on every push.

SOCShield — Security Operations Dashboard

socshield-rose.vercel.app | github.com/SiddhantisDead/socshield

FastAPI, Python, React, TypeScript, PostgreSQL, Docker

- Built a FastAPI backend with custom log parsers, a rule-evaluation pipeline and JWT role-based auth, paired with a React dashboard rendering live severity breakdowns and a heatmap visualisation.
- Deployed across three services — React on Vercel, FastAPI on Render, Neon PostgreSQL — with Docker for reproducible local environments.

Smart Quiz Challenge — C++17 Quiz Engine

github.com/SiddhantisDead/smart-quiz-challenge

C++17, Qt6, CMake, GoogleTest

- Architected a frontend-agnostic engine in C++17, decoupling parsing, filtering and scoring from both a Qt6 desktop GUI and a terminal client, validated by a GoogleTest suite run via GitHub Actions CI.

EDUCATION & CERTIFICATIONS

Galgotias University — B.Sc. Computer Science (Specialization: Cyber Security)

Greater Noida, India · 2026

AWS Cloud Practitioner (Self-Paced) · AWS Solutions Architect – Associate (Self-Paced) · Cisco CCNA: Introduction to Networks · Cisco Introduction to Cybersecurity

Languages: English · Hindi · Marathi
